

Just The Facts: Wild Interiors® Foliage Care

Wild Interiors® Foliage and Signature Foliage plants allow you to bring the outdoors in, offering a wide selection of leafy plants to appeal to your design vibe, whether it's modern, traditional or even boho.

Wild

Did You Know that Standard Wild Interiors® Foliage Plants...

Prefer sunny rooms with indirect, natural light

Can move to a different location with more or less light; but need to do it gradually

Thrive in damp, not soaking, soil. If soil is dry to the touch, or the plant feels lighter than usual, it's a sign it's time to re-water

Will wilt if overwatered, its roots will also rot

Have curled, crispy leaves and crusty soil if it is underwatered

When it Comes to Wild Interiors® Signature Foliage Plants You Should...

Keep plants from this Signature Collection™ in medium light with partial shade

Water your plant frequently enough to maintain 1" to 2" of damp soil

Remove any dead leaves from the plant, which will help them grow full and uniform in their container

Be sure to check care instructions for each individual plant, as these rules of thumb can vary by plant
